

Gender Disparities Within Salaries

Data Shows that males are making more money than women at every education level. However, women in senior positions surpass the \$100,000 salary threshold at a greater frequency than their male counterparts.

Key Findings:

- Only occurrence of women out earning mean are between ages of 20-30.
- Note the large jump in women’s salaries from Master’s degree to PhDs, however still less than men’s.
- Overall averages for salaries at all three education levels are within a 20,000 range.
